Abstract

The business operations have to make a project planning and feasibility analysis by getting necessary information and solve the systems they will establish, before they initiate any process. Especially, the students are expected to learn project planning and have necessary knowledge and skills for applying the projects before they graduate from the applied sciences departments of universities. In this study, we prepared a questionnaire and applied it to 140 graduate students who were randomly selected from the applied sciences departments of Marmara University in Turkey. In the questionnaire, there were two groups of questions A and B, part A contains individual information about responders, and part B contains their knowledge level of project planning and their opinions about necessity in education. We examined the knowledge of these 140 graduates in the basic concepts of project planning and whether they have project-planning tendency, and then evaluated the results with SPSS. We found Cronbach alpha reliability coefficients of the questionnaire as 0.9321 for part B and
